

Example Posters: Working with the IMW Poster Template using the DOT and BiGSEM Logo

First Author, University of Vienna, first.author@univie.ac.at
Second Author, University of Vienna, second.author@univie.ac.at

Abstract

This is the abstract. To place the abstract on the poster, write the text in the `\abstract` command like in the accompanying tex-file.
This is a very, very long paragraph to show that the abstract spans over all columns and does not conform to the separation like the main body of the poster. In general, the abstract should contain a concise description and/or summary of the contents of the poster.
This is a very, very long paragraph to show that the abstract spans over all columns and does not conform to the separation like the main body of the poster. In general, the abstract should contain a concise description and/or summary of the contents of the poster.

1 Basic Options

Options are set in brackets with the `\documentclass` command, like `\documentclass[<options>]{IMW_poster}`.

1.1 Paper Size

Available papersizes are a0 through a4, where a4 is a draft-like option scaling the contents down. The default option is a0.

1.2 Font Sizes

The available font sizes are 14pt, 17pt, 20pt, 25pt and 30pt. The default option is 25pt.

1.3 Recommended Combinations

The recommended combinations of paper size and font size are {a0, 25pt}, {a1, 17pt}, {a2, 14pt}, {a3, 14pt}, {a4, 25pt}. A4 papersize should be paired with a large font like 30pt or 25pt since the contents are scaled down. Note that the recommended combinations do not scale font size and paper size perfectly.

1.4 Logos in the Header

The logos in the header of this poster template work similar to the logos in a typical beamer template. Each logo, from left to right department, institute and organization, has a language option. The logos are set-up in such a way that the whitespaces are balanced. The `\department` option currently allows for the `univie` and `none` keys. The `\institute` and `\organization` options currently default to `none`. The default options are the German Uni Wien department logo and no institute or organization logo. Section 5 contains notes on how to add additional logos.

1.5 The structurecolor option

The `structurecolor` option can be called with any named color or color mix as the key. It changes the color of structural elements like the section or title headers and the line around main body.

1.6 The BiGSEM and CUDE options

The `BiGSEM` and `CUDE` options are aggregate options that set the appropriate oragnization logos and set the structure color as the primary color of the chosen logo.

1.7 The bottomright option

If the `bottomright` option is called, whatever is given in the `\bottomright` command is placed in a `TikZ` node at the bottom right. This is analogous to how the old poster template looks.

2 Figures and Tables

To place a picture or table on the poster use the `figure` or `table` environments, respectively, as shown below. Specifying any placement options, will cause the figure or table to either not appear or display at the end of the document. Following is an example figure and an example table:

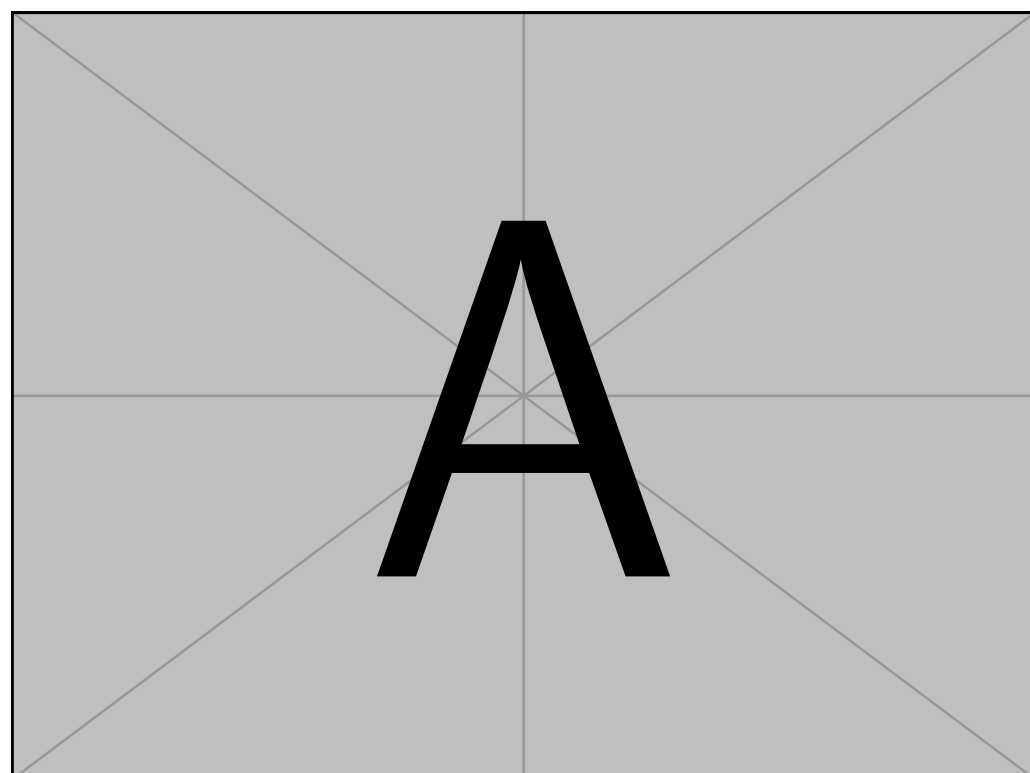

Figure 1: This is an example figure.

Name of Director	Time of Directorate	Num of Nobel Prizes (so far)
C. C. von Weizsäcker	1970 - 1973	0
R. Selten	1973 - 1984	1
J. Rosenmüller	1984 - 2002	0
W. Trockel	2002 - 2009	0
F. Riedel	since 2009	0

Table 1: This is an example table.

3 Math Environments

Math environments work like usual:
For all $x \in \mathbb{R}$ and $Y \sim \mathcal{N}(0, 1)$ we have

$$\begin{aligned} -x^2 &\leq 0 \\ \leq \mathbb{P}(Y \geq 0) &\leq 1. \\ \sum_{i=1}^{\infty} \frac{1}{2^i} &= 1 \\ \exp(i\pi) + 1 &= 0 \end{aligned} \tag{1}$$

4 References and Citations

References work like usual:
Tables like Table 1, figures like Figures 1 and equations like Equation (1) can be referenced.
Citations with `\biblatex` can also be implemented: Einstein, 1905, Dirac, 1981, D. E. Knuth, 1968, D. E. Knuth, 1973, D. Knuth, n.d., Greenwade, 1993

5 Notes on Implementation

Logos in Header: Adding additional department, institute or organization logos is simple. The process for adding a new institute is described below but departments or organizations are analogous. (Note that no department language is equivalent having just the base logo and thus the none language variant can be omitted.) Say we want to add the Example Institute and have logos as .png files on hand. In this case, we need to create a new folder named 'example' inside of logos/institutes, in which we put the logos and rename them to `example_logo_{language}.png`. For the logo without any text we replace {language} with 'none'. Now we can simply call the theme with the option `\institute=example` and the desired 'institutelang' like the pre-configured institutes.

Floats: Since the poster template is realized with a `multicols` environment, floats are not supported in the main body of the poster. As a result, specifying any placement options for figures or tables, will cause the figure or table to either not appear or display at the end of the document.
